Tubercle Cures Tuberculosis

It will cost you nothing to investigate the cases which have been cured. That is all we ask. You owe that much to yourself. Offices: 407-3 National Bank of Arizona Building, Phoenix.

THE KIND OF A ROAD ARIZONA OUGHT TO HAVE

An Inspection of the Prescott Sample.

Territorial Auditor George Mauk returned yesterday morning from an official visit to Prescott to inspect the section of the territorial road which was built south from Prescott last fall and to inspect the operation of the Pioneer's Home.

Though the section of the territorial highway was built as an integral part of the highway it was not expected that it would be extended on the magnificent scale on which it was begun, but it was built rather as a sample piece of road such as the entire highway ought to be if the money could be raised. But as much of it was constructed at a cost of \$5,000 a mile. It was evident that that kind of a road could not be made to thread the territory.

As a sample it has surpassed the expectations of the builders. It has stood the test of the fierce mountain torrents of the winter, the snow and the freezing and now it is in as good shape as when the workmen left it. It is graded on both sides like a railroad bed and the culverts along it are of cement. That section will be seen there centuries from now just as there are seen at the present time sections of roads that the Romans built when they were trying to civilize Britain.

The foundation of the road is rock overlaid by a sort of cement gravel and in places where the gravel was lacking it was hauled.

Of course, the construction of such a road all over the territory is not despaired of. It is merely not in sight at the present time, with the means at hand. The good roads movement is steadily gaining in force and perhaps the time may come when the people of the territory may choose to bond themselves for just such a road as this pleasing sample. More people now believe that it is a good investment than thought so a year ago. In the course of a time a majority of them may think so.

Mr. Mauk found the Pioneer's home in excellent condition. Twenty-three pioneers are being entertained and most of them are more contented than they ever were before. Some of them never had a good home before and others were sadly in need of such a place of refuge when it was opened. The home is more of an institution than its most sanguine promoters ever expected it to become and Mr. Mauk said he believed that it was the wisest, most humane investment the territory has ever made.

ADVICE TO MOTHERS—Mrs. Winslow's Soothing Syrup should always be used for children's Teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for Diarrhoea. 50c a bottle.

CATCHING COLD.

Coryza is an inflammation of the mucous membrane lining the cavities of the nasal passages and may be either of the acute or chronic variety. In its acute form it is generally called "a cold in the head." The reason for this is that, given certain conditions of the system which tend to inflame the mucous membrane, the acute attack can very often be traced to exposure to cold, draughts or damp. It can perhaps just as often be traced to heat, dust and stuffiness, but whatever may be the final touch it is certain that the victim of the coryza was in a condition in which his powers of resistance were reduced or he could not have "caught cold."

It is of great importance that those people who spend many months of the year traveling from one attack of coryza to another should learn just where to place the blame for their trouble. It is a pity to get into the habit of blaming every open door or window or draughting every unexpected breath of air, because this only leads to the course of life most to be avoided. If a person finds himself with the "catching cold" habit increasing winter by winter, depend upon it there is something wrong and that something is not fresh air, because that is the very thing he of all people most needs. In such a case the daily habits should be carefully overhauled.

Does the sufferer overeat, and especially does he take too much animal food and too little exercise? This mistake is at the root of the coryza habit in many cases. It is simply the sign of rebellion on the part of the overloaded system. Often the trouble may be traced to too much heavy clothing, to rooms kept too warm and to an atmosphere dried up with steam heat and no ventilation. People who sleep in shut up, stuffy bedrooms ought to live in a state of grateful surprise if they do not have constant colds.

The change that can be produced in the human constitution in this respect by a continuous course of common sense applied to daily life is almost like miracle working. But the course must be begun today and kept up at least 365 days in the year. The cold catcher must pay minute attention to the digestive process, and is probably better off to eat meat not more than once a day at the most. His bedroom window must stay open winter and summer, not two inches, but all the way open. He must accustom himself to cold water bathing. This does not necessarily mean ice water bathing. A bath thermometer is a cheap purchase and 65 degrees is cold enough for most persons.

Deep, slow breathing with the mouth closed should be constantly practiced, and never more faithfully than at the moment when a cold seems to be in the act of getting itself "caught."—Youth's Companion.

SUNNY MONDAY

If your time is worth anything, Sunny Monday Laundry Soap will be a boon to you. Its wonderful dirt-starting qualities enable it to do the work with little assistance from you, while its purity is indicated by its whiteness. It will double the life of your clothes.

The best is the cheapest in the end—in laundry soaps as well as anything else.

TESTING A FLYING MACHINE.

Not a Full Grown Model, but One Built by a Boy.

"I suppose," said Mr. Penguin, "that there must be at least half a million boys at the present time building flying machines. I don't mean full grown monoplane or biplane, but boys' building models, little flying machines. The aeronautical periodicals are full of advertisements of dealers who sell flying models and parts from which ambitious youths can construct model machines for themselves, and my boy has caught the craze from the rest."

"But my boy had ideas of his own about what a flying machine ought to be and he didn't follow any of the stereotyped successful forms. He built his on a plan entirely different."

"I told him when I saw his completed plane—it was to be a monoplane—that it would never go up, it wasn't built right; but he, with the joyous confidence of youth—said it would, or it ought to, any way, and he kept right on along the lines of his own original plan."

"And then, his plane completed, he bought the propellers—this was to be a twin screw machine—elegant little light propellers made of white wood and very nicely and accurately fashioned, propellers about ten inches in diameter and costing, as I recollect, 85 cents each, and he bought rubber bands at a cost of a dollar and a half."

"Those were the final purchases. He had previously bought tin propellers that didn't work, and various other contraptions that proved useless. I guess the total outlay for this model must have been somewhere about \$5, and I think the construction must have taken about a month."

"Well, finally he got the machine finished, propellers mounted and everything ready, and then he tried her out in the house. She didn't rise, but the boy thought that was because there wasn't room in the house for it to get a good start. He tried her about thirty or forty times in the house, but all she'd do there was to run around on the floor and run into and scratch up the furniture, and the boy's mother finally put a veto on that."

"Then he said that as soon as the

If you have a Joe Jefferson shape—don't let any one sell you an Eddy Foy suit.

Clown styles are not becoming to your particular style of beauty.

Your clothes bespeak your own individuality. They require deep thinking—much study—skill and earnest effort—on our part.

snow was off the ground we'd take her down in the yard and try her there, where there was room and this morning the conditions being favorable we took her down and tried her there on a flagged walk about eighty-five feet long.

"Of course the boy was going to start her against the wind, which was the only correct way to start a flying machine, and so we took her down to one end of the walk, the end toward which the wind was blowing. Then the boy wound up the rubber bands attached to each propeller, wound 'em good and tight so's to give plenty of power, and then he set her down on the walk, and I stood off to one side, and then when he was all ready he let her go."

"And she didn't rise, but she did go on the walk about ten feet against the wind, and then the wind held her up and even backed her a little, with the propellers still whirling, till they had run down."

"Too much wind," said the boy designer, and so we took her down to the other end of the flagged walk to try her with the wind."

"And then the boy wound her up again, good and snug, and then we set her down and let her go again. And she did go—on the walk; she didn't rise. She stuck to the walk, but she certainly did go ahead at a great rate, with the boy and me after her, for she showed a disposition to yaw, to steer off to one side or the other, and then we had to grab her and straighten her out. And going that way she went the length of the walk, eighty-five feet, and I guess she'd have gone fifteen feet further if she'd been room."

"And then we tried her two or three

times more, but always she did just the same thing. She would run on the ground, and run fast; but she wouldn't rise. As a wind wagon she was a great success; but as a flying machine? Nitsky.

"And was the boy discouraged by the machine's behavior on this first official experimental trial? Not at all. Far from it. He says he sees what's the matter with her, and he can fix that all right, and now he's at work on it again, and seriously I'll bet there's at least half a million more boys in this country at the present time doing just the same thing."—New York Sun.

Lame Shoulder is nearly always due to rheumatism of the muscles, and quickly yields to the free application of Chamberlain's Liniment. For sale by all dealers.

In cases of rheumatism relief from pain makes sleep and rest possible. This may be obtained by applying Chamberlain's Liniment. For sale by all dealers.

PATCH QUILTS.

The housewife who has a patch quilt tucked away in some trunk in the attic will do well to bring it from its hiding place and spread it on the bed in her guest room this spring, says the Washington Herald. If the real antique quilt is not available, then the making of one, piecing the squares together and stitching them, is a pleasant pastime.
